# Wireless Site and Network Assessment

### Key Features

#### Reliable

- Fast, expert assessment
- Direct from Apple
- Services performed by expert Apple technical representatives

#### Simple

- Single source for
  - Assessment
  - Apple hardware
  - Installation

#### Affordable

- Cost-effective assessment service

Is your school ready to take advantage of wireless networking? Apple's AirPort wireless networking technology provides high-speed shared Internet access without wires. AirPort-equipped computers can communicate up to 150 feet away from an AirPort Base Station—even through walls—so your wireless Internet access can extend across several classrooms and even outdoors.\* Before you invest in the project, make sure that everything you need is in place. Apple iServices Wireless Site and Network Assessment gives you the ability to have an Apple expert review your site to ensure that the building is suitable for wireless networking before you purchase. This service will provide you with the information you need to be sure that your AirPort wireless network will perform as required when installed.

#### Scope of Services

- Provide a Statement of Work for your review and approval
- Identify number and locations of wireless client workstations
- Identify potential Ethernet network interface locations
- Determine optimal access point equipment and locations
- Create proposed remote client and access point configuration plan
- Identify potential sources of radio frequency (RF) interference
- Determine recommendations for additional infrastructure upgrades and wireless components, as needed
- Identify electrical requirements
- Provide an Assessment Report detailing these findings and recommendations

This service does not include

- Removal of sources of RF interference
- Planning or design of the wired portion of the network
- Redesigning, extending, or repairing existing networks, including moving of access locations
- Software or driver upgrades for non-Apple products
- Installation of wireless network
- Wireless connectivity between buildings

## Apple iServices Wireless Site and Network Assessment

### Prerequisites

- An existing Ethernet network, including Internet connection, if desired
- A detailed building floor plan with network drop and power locations
- Complete site access
- Specific usage plans, including number of wireless users

### Availability

- Available to education customers only
- Provided at one physical location only
